EXECUTIVE SUMMARY

Researches were conducted in Macedonia, Serbia, Croatia and Bulgaria in order to provide a preliminary assessment of the legal and institutional framework, identify existing practices for e-waste management, but most importantly to obtain valid and quantifiable statistical data about the situation and awareness for e-waste in the respective countries.

The research was consisted of two complementary parts. The first part is to assess the legal and institutional framework as well as identify existing practices for e-waste management. The tools used for this part of the research were: interviews of decision makers, mail surveys and focus groups gathering decision makers, media and CSO representatives. The second part was survey using a semi-structured questionnaire for gathering the data. It targeted a representative sample of citizens in the four countries and will be conducted by a specialized company.

The results of this research provide road map for the remainder of the "Balkan E-Waste Management Advocacy Network" Project and will provide a solid and credible base for developing context-sensitive advocacy materials for CSOs from the Balkan region.

Balkan E-Waste Management Advocacy Network (BEWMAN) is a two year project, initiated by Metamorphosis Foundation (www.metamorphosis.org.mk) and co-financed by the European Union's IPA 2008 Programme of the Civil Society Facility, with overall objective to improve the legal and institutional framework that will contribute to proper e-waste management in Macedonia, Serbia, Croatia and Bulgaria, in accordance with relevant with the EU legislation and standards. Project partners are Computer Aid International (United Kingdom), ZaMirNet (Croatia), the association Center for civil society development PROTECTA (Serbia), and Bluelink Foundation (Bulgaria).

The results are published online only, and licensed under a [Creative Commons Attribution-NonCommercial 3.0 Unported License](https://creativecommons.org/licenses/by-nc/3.0/).

METHODOLOGY

- Data collection method: telephone interview conducted in the household of the respondent – Computer Aided Telephone Interviewing (CATI)
- Data source based on random representative sample of the population in Macedonia, aged 18+ years of age, based on sample frame from telephone directory (electronic)
- Type of sample: two-staged stratified combined representative sample, with the following selection stages :
 - Household simple random sample (CPCWoP)
 - Household member aged 18+ years of age
- Sample stratification is performed according to:
 - Type of settlement – urban/rural
 - Four geo – economic regions (Stratums)
- Interview control: automatic (100% procedure control), interactive (100% logic control and consistency control).
- Target population: Citizens of Republic of Macedonia aged 18+ years of age
- Survey was conducted from 14 to 18 January, 2011

KEY FINDINGS

The modern living in the era of technical and technological society implies everyday development of the ways of handling e-waste. This is a subject for a broad discussion in every modern society, including the Republic of Macedonia, as a country that follows the world technique and technology trends.

The survey is divided into several parts. The first part refers to the

Household appliances used on an everyday basis.

Concerning the larger household appliances which are used on an everyday basis, the highest percentage, or 99% of the total population have refrigerator, 94% have washing machine, 92% have oven, 53% have some electric heating element, while only 20% have electric coffee machine.

Regarding the smaller household appliances, 96% of the total population have electric iron, 92% clean with electric cleaning machine, 81% have hair-dryer, and only 18% have fan at home.

IT and telecommunication equipment: 86% out of the total population in the Republic of Macedonia have at least one cell phone, 52% have personal computer, 29% have notebook, while modems are owned by 50% of the households. The LCD monitors (36%) gradually replace the CRT monitors (26%). In relation to the other equipment in the household, the highest percentage – 92% have CRT (usual) televisions, while flat screen televisions have only 23% of the households. The radio-56% and the DVD player – 52% are owned by more than a half of the population in the Republic of Macedonia, while 27% have HI-FI, and 20% have camera.

Batteries: The accumulators which are used for various purposes, other than cars, are used by a small percentage of households – only 8%. Unfortunately, the awareness of the population of the Republic of Macedonia about the dangerous effect of the batteries is still not very high, so that the single-use batteries are used by 61% of the population, while the rechargeable batteries are used by only 25%.

Out of use household appliances, but still kept at home

This category covers the household appliances which are potential e-waste, but for some reason, we still keep them at home. 29% of households in the Republic of Macedonia have at least one cell phone that they didn't throw out; 22% have refrigerator, 19% - CRT television that isn't used anymore, and 17% have an oven and radio which aren't used, 13% have washing machine, PC- 6%...

In relation to those 29% who didn't throw out the cell phones that they don't use, more than 42% had been using the cell phones from 2-4 years, while 24% had been using them from 1-2 years. 19% of the households had been using them from 4-6 years. This indicates to the rapid development of this technology that causes the old equipment to be quickly replaced, so that 43% of households have cell phones that are not used but which are in good condition.

The quick development of the computer technology can be seen through the quick replacement of the PCs which aren't used. 33% of the households having a PC they don't use, had been using it from 4-6 years, and what's more, 68% of those computers are in good, usable condition.

Concerning the larger household appliances, such as refrigerator, oven, washing machine, CRT TV etc, the period of usage is much longer (32% of the households had been using the refrigerator from 10-20 years, while 28% - for more than 20 years), (washing machine – 36% had been using it from 10-20 years, while slightly smaller is the percentage, or 34%, of those who had been using it for more than 20 years) (CRT-39% had been using it from 10-20 years, while 30% - for more than 20 years). Most of these appliances have been replaced with new ones, although the old were still usable.

Household appliances removed from the household

This category refers to the e-waste which is removed from the household. The highest percentage of appliances that are removed from the household are refrigerators – 34%, laundry washing machines – 27%, ovens – 24%, CRT – 23%, cell phones – 16% etc. Due to not having an organized way of handling the e-waste, almost all household appliances that have been removed from home, were removed by means of giving the appliance as donation/gift, giving/selling to the street dealer (known as rag-and-bone man), as well as leaving the appliance on a street, close to container.

40% of the total population that removed a refrigerator from home (which is 34%) gave the refrigerator as a donation/gift, while 30% gave it or sold it to a street dealers (known as rag-and-bone man)

The situation is similar with those 27% of the households that removed the washing machine from their home. 33% of them gave the mashing machine as a donation/gift, while 35% gave it/ sold it to a street dealer.

The CRT televisions in the households were mostly given as a donation/gift – 43%, while 23% were left on a street, near a container, while 19% were left somewhere else.

Concerning the offered 4 options for handling the e-waste, 45% of the citizens of the Republic of Macedonia think that the most suitable way for its removal from the household is to be donated and taken away from home. For 28% of the

population, most suitable way for removing the e-waste is its giving/selling to a reseller having a permission for his work, while 15% would prefer to leave the e-waste on a street, near container. Slightly lower (13%) is the percentage of those who think that the most suitable way is to leave the e-waste in the specially designated areas in the municipality.

The second most suitable way of removing the e-waste from the household, according to 32% of the population, is e-waste to be given/sold to a reseller having a permission for his work, 29% think that the e-waste should be donated – should be taken away from home, 23% think that most suitable way is to leave the waste in specially designated areas in the municipality, where the smallest part of the population, as a second choice, would leave the e-waste on a street, near container.

How to read tables

Education-the last finished school:

	Total	Gender		Type	
		Male	Female	Urban	Other
N	1198	599	599	704	494
sig		0.00		0.00	
No formal education	1.8	2	2	1	2
1 to 7 grades of primary school	5.1	4	6	3	8
Primary school (completed, 8 grades)	19.4	17	22	14	27
One-two year vocational school	1.3	1	2	1	1
Three year vocational school	11.8	15	9	10	14
Four year vocational school	40.4	41	39	44	35
High school	4.6	4	6	6	3
College, first degree of university	6.3	8	5	7	5
Faculty, academy	8.8	8	10	12	4
Master's degree	0.3	0	0	1	
Doctorate	0.2	0		0	0
Total	100%				

- Title explains the variable whose relative frequencies are given in the table.
- Total in the first column shows percentages for each category of the tabulated.
- Each next column represents percentages of the given variable within some subpopulation.
- Row marked with **N** denotes size of the base, i.e., the size of (sub) sample on which the percentages are calculated.
- Row marked with **sig**, represents significance of Hi-square statistics of the observed variable and variable from columns, if hi-square is significant, significance is written in white letters.
- The last row in the table **100%** indicates that all values in columns are added up to 100, that is, that column percentages are given.

Above average			Average	Below average		
0.01	0.05	0.10		0.10	0.05	0.01

Cells of the table are colored in blue, or red, if values they contain are considerably above or below the average. Three shades of blue or red color are used for three degrees of significance, the lightest shades for deviations significant on the level 0.10, medium shades for the level 0.05 and the darkest shades of blue and red for the level 0.01.

Example of interpretation of data from the above table (structure of education):

- Significance of hi-square (significance of both hi-squares of statistics is lesser than 0.01) tells us that distribution of education by gender/ type of settlement differs significantly.
- Glimpse at the cells of the table shows that there are significantly more males with three year vocational school on the level of significance 0.05 (total number of respondents in the sample with this type of education is 11.8%, and among males 15%). Similarly, there are significantly less females with this type of education (on the level 0.05) 9%.
- There are significantly more respondents with faculty, academy (level 0.01) in urban settlements compared to entire population (12%), and significantly less in other types of settlements (the same level of significance 0.01) that is, 4%.

Please assess general situation in the country on the scale 1 to 5

	Total	Gender	
		Male	Female
N	1013	500	513
sig		0.13	
Grade 1	23.1	23	23
Grade 2	35.3	37	34
Sum -	58.4	59	57
Grade 3	35.1	35	36
Sum +	4.9	5	4
Grade 4	3.9	4	4
Grade 5	1.0	1	1
Refusal	0.5	1	0
Doesn't know	1.0	0	2
Total		100%	
Mean	2.23	2.24	2.23

- If tabulated variables represent the respondent's assessment on some scale 3 more rows are added.
- Row marked with **Sum -** represents the sum of percentages on negative.
- Row marked with **Sum +** represents the sum of percentages on positive grades.
- Rows below grades contain other non-specific answers of the respondents.
- Row marked with **Mean** represents arithmetic mean of the given grades.

Which brands do you know?

	Total	Type	
		Urban	Other
N	502	302	200
Brand C	97.8	98	98
Brand A	93.2	95	91
Brand D	39.1	41	36
Brand B	22.3	26	17
Brand E	22.1	19	27
Other	20.9	26	14
I don't know any	0.2	0	

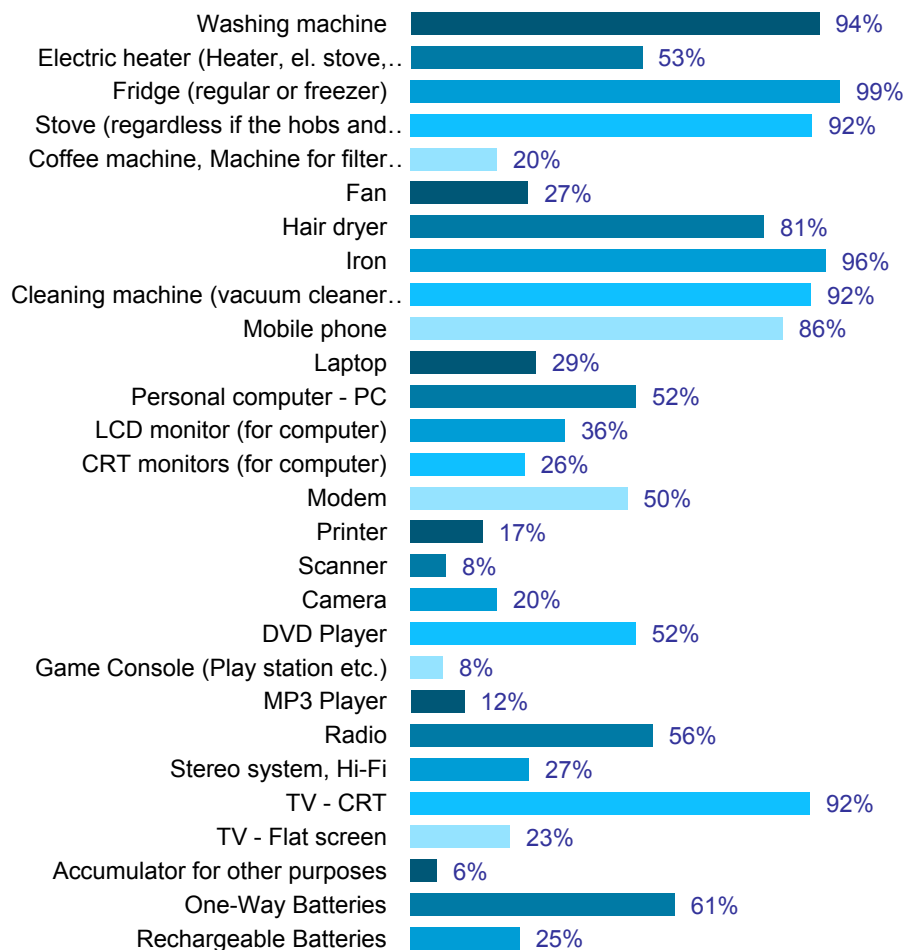

- In case of multiple response (the respondent can give several valid answers, modalities) data in cells represent a percentage of (sub) population which mentions, that is, answers positively to given modality.
- Please note that row **100%** is missing – that is because percentages do not add up to 100%.
